

WEIGHING PLUS METAL DETECTION FOR MAXIMUM PRODUCT SAFETY

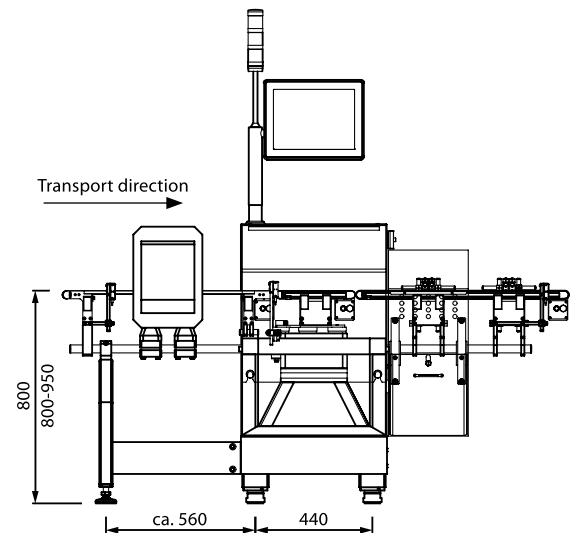

HC-A MDi

The **HC-A-MDi** model is synonymous with high precision weighing in combination with extremely sensitive metal detection for optimal performance. It is a practical combination of inspection technologies in the interests of increased consumer safety and provides scales and metal detector in one space-saving unit, which can be operated from one HMI and easily integrated as part of any line.

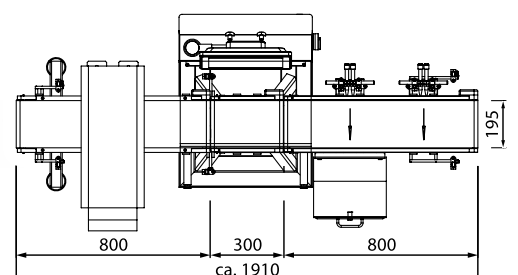

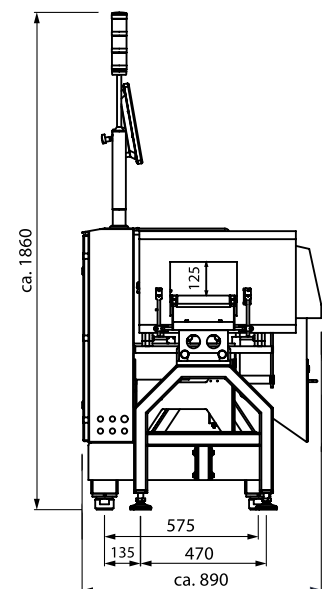

„The technical flexibility of OCS Checkweighers is primarily what convinced our company. The machines feature a compact and robust design with efficient controls. These checkweighers and metal detectors perform a very accurate control of our dairy products with outstanding reliability and quality and practically no main-

tenance costs. This is the reason we can recommend, without reservation, OCS Checkweighers as a top supplier of high-precision weighing and inspection systems.“

Willi Tauber,
